

ASSIGNMENT / PROJECT SUBMISSION FORM

PROGRAMME : BCS, BCNS, BSE
SEMESTER : Jan / Apr / Aug 2024
SUBJECT : WEB1201 / WEB2014 Web Fundamentals
DEADLINE : 31 July 2025, 22:00 MYT

INSTRUCTIONS TO CANDIDATES

- This is a(n) ~~individual~~ / group project.

IMPORTANT

The University requires students to adhere to submission deadlines for any form of assessment. Penalties are applied in relation to unauthorized late submission of work.

- Coursework submitted after the deadline but within 1 week will be accepted for a maximum mark of 40%.
- Work handed in following the extension of 1 week after the original deadline will be regarded as a non-submission and marked zero.

Lecturer's Remark (Use additional sheet if required)

List down the name of the group members and the student IDs here.

1. Robyn Yeong
2. Leow Yue Xuen
3. Yaw Jia Tong
4. Ong Xin Rou

We Robyn Yeong Kah Yee (21083027), Leow Yue Xuen (23023195), Yaw Jia Tong (23088891), Ong Xin Rou (23088479) received the assignment and read the comments.

Poßvv, YX, JT, 1R / 2025/7/28 (Signature/Date)

Academic Honesty Acknowledgement

"I Robyn Yeong Kah Yee, Leow Yue Xuen, Yaw Jia Tong, Ong Xin Rou verify that this paper contains entirely my own work. I have not consulted with any outside person or materials other than what was specified (an interviewee, for example) in the assignment or the syllabus requirements. Further, I have not copied or inadvertently copied ideas, sentences, or paragraphs from another student. I realize the penalties (refer to page 16, 5.5, Appendix 2, page 44 of the student handbook diploma and undergraduate programme) for any kind of copying or collaboration on any assignment."

Poßvv, YX, JT, 1R / 2025/7/28 (Student's signature / Date)

Data Protection

The protection of personal data is an important concern to Sunway University and any personal data collected on this form will be treated in accordance with the Personal Data Protection Notice of the institution.

1. Introduction

This report shows the development process of our website 'MeoWoof Pet Shop', an engaging and user-friendly online platform designed for the use of a friendly neighbourhood pet shop. Our main objective was to create an aesthetically pleasing user interface that effectively showcases a range of high-quality products and adorable pet listings, while also providing a pleasant shopping experience. The scope of our website includes a responsive homepage with an interactive banner utilizing JavaScript, detailed pet listings, user login, a functional contact us link, and a responsive design for different screen sizes. The MeoWoof pet shop website was a joint collaborative effort that aimed to demonstrate our understanding of our core web fundamental concepts, such as HTML, CSS, and JavaScript.

2. Design Concept

To achieve the goal of creating an aesthetic and effective online pet store, we carefully considered when deciding on the visual design, layout and user experience. As our website targets individuals who are interested in getting a pet or current pet owners looking for pet products, our design decisions prioritise their shopping experience by making the website interactive, easily scannable and navigable, and decorated with pet-related elements to keep their interests (Mailchimp, n.d.).

For visual design, we choose an analogous colour scheme with yellow as the main background colour, with orange, brown, and pink as supporting colours and white as contrast. By using warm and bright colours, we can evoke the feeling of walking into a cheerful and inviting pet store when users visit our website. Furthermore, according to colour psychology, these colours can be associated with happiness and warmth, which relates to the pet store's goal of connecting pets to a loving home (Stevens, 2024). For font, we used the system font for content to increase readability and a special text style for page titles. Moreover, we included minimal decorative images and only used them where necessary, such as on the homepage and about us. By doing so, we can provide a clean and simple interface for users to focus on their main purpose — browsing products, writing messages, signing up or more.

For layout design, every page will include a header and footer to support navigation and accessibility. The header shows our pet store's name, logo and a navigation bar or hamburger menu, while the footer shows the pet store's contact information, which facilitates users to reach out. Additionally, the content of each page is organised into defined sections using container boxes and visual elements. We also designed our website to be responsive by adjusting different layouts for different screen sizes. For instance, desktop users will navigate through a horizontal navigation bar in the header, while mobile users will navigate through a hamburger menu for space efficiency. In the shop page, items are displayed in rows on desktop for wider viewing, while the layout is switched to a column on mobile. This approach can improve user experience by ensuring a user-friendly experience across all devices.

To further enhance user experience, we also added interactivity features such as hover effects, pop-ups and form validation with feedback. Hover effects and pop-ups can guide users, while form validation can ensure data quality. We also customised the cursor to an animal paw and implemented hover effects on pet-related decorations to strengthen the design theme and make our website more interesting.

As for the functions of our website, we divided them into several webpages. First, our homepage features clear and concise information about what we offer in our pet shop, helping users understand our services and decide whether to explore further. The 'Shop Now' button on

the homepage can be clicked to go directly to the shop page, where users can see the pets currently available. When users click into a pet from the shop and are interested in adopting it, they can easily contact us by clicking on the button. Furthermore, the About Us page contains details about our pet shop and each member's description, while the contact page allows users to send questions or messages to us. Moreover, the login and sign-in pages enable us to save user information so they can receive notifications about new activities for the first time. Lastly, we created a shopping cart for users who want to make a purchase, allowing items to be added to the cart and checked out later.

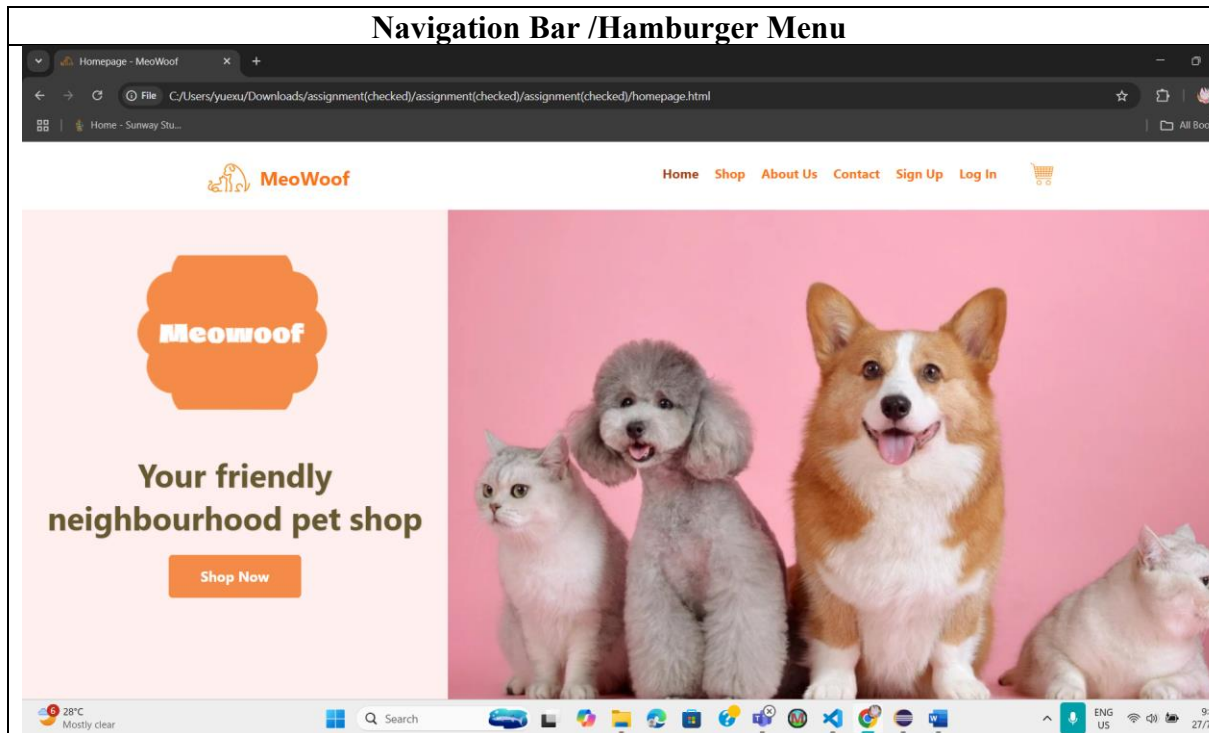

3. Challenges and Solutions

One challenge faced throughout developing the 'MeoWoof Pet Shop' website was the process of implementing a fully responsive design for all screen sizes. We first encountered this problem when we were trying to view the website in a smaller screen. This helped us understand that we needed to make our website accessible to users of smaller screens. At first it was difficult to understand the viewpoints of different screen sizes and how to properly apply CSS accordingly using @media, but as a team we knew we had to improve on this to make our website better. We used several methods we learnt from online to make the website accessible on smaller screens, resize images using max-width and object-fit, edited font sizes to better fit screen size, and adjusted layouts with Flexbox and CSS grid. All of this helped us make the website better for viewing regardless of the screen size.

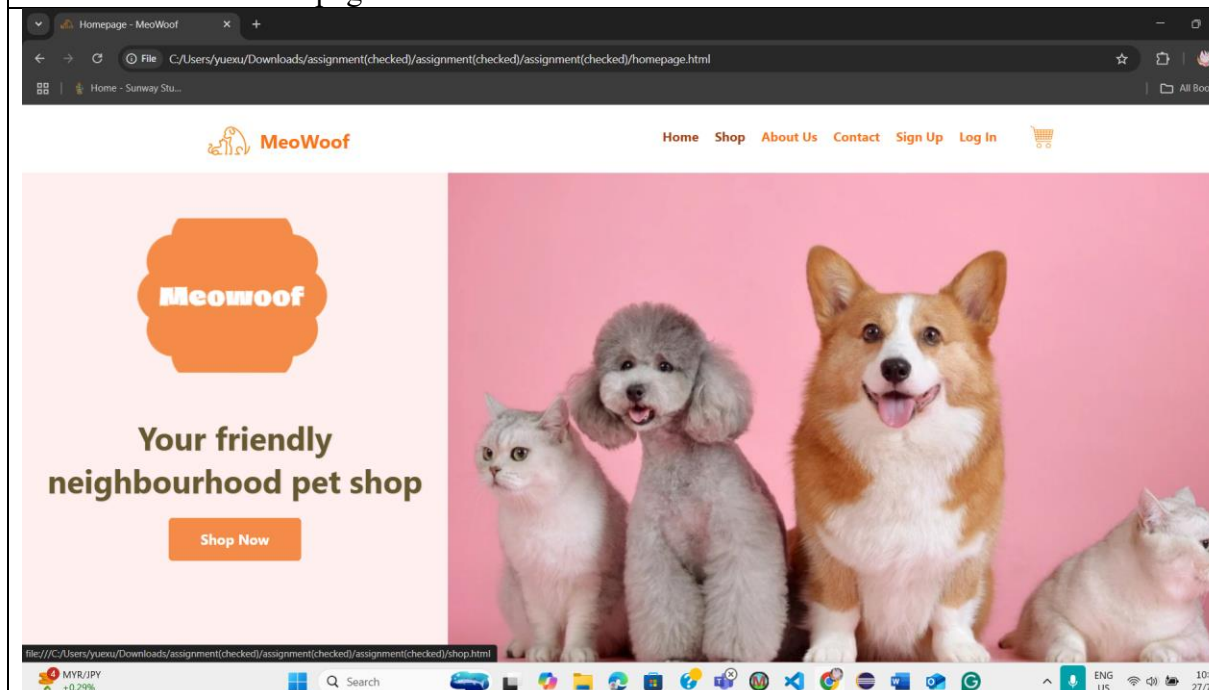

Another problem is that one of our group member encountered an issue when testing the Log In and Sign Up pages. After the member entered all valid inputs and clicked the respective submit buttons, the browser redirected to the appropriate success page (success-login.html or success-signup.html) but displayed the following error: "HTTP ERROR 405". This issue did not occur for other group members. After some investigation, we discovered that this issue only happened when the HTML files were launched using the Live Server extension in Visual Studio Code. After doing some research, we found out that this is because Live Server is designed to serve static files and does not support POST requests to static .html pages. Since both our Log In and Sign Up forms used the POST method to redirect to a static success page, Live Server returned a 405 error instead of loading the page. The issue was resolved by opening the HTML files in the default browser instead, which allowed the form to work correctly. This experience had taught us the importance of testing websites in different environments and being aware of the limitations of development tools.

4. Implementation and Results

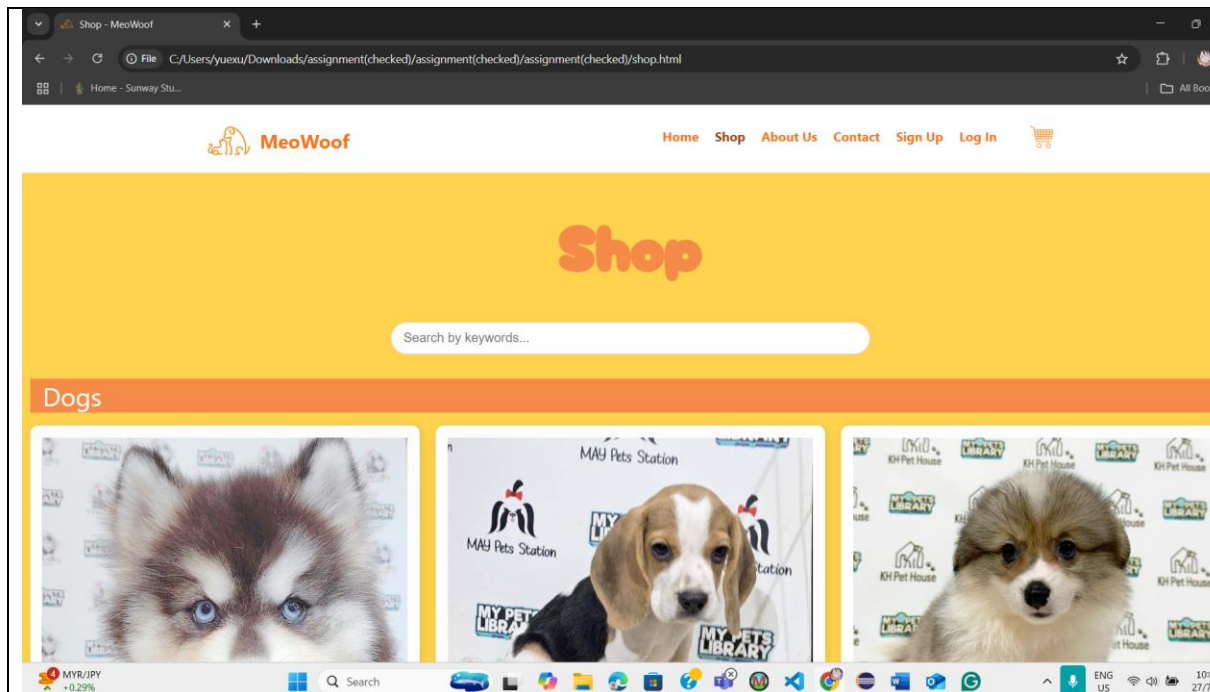

Our website includes many interactive features and error checking mechanisms for form validation. Below, we present various test cases with results to demonstrate their effectiveness.

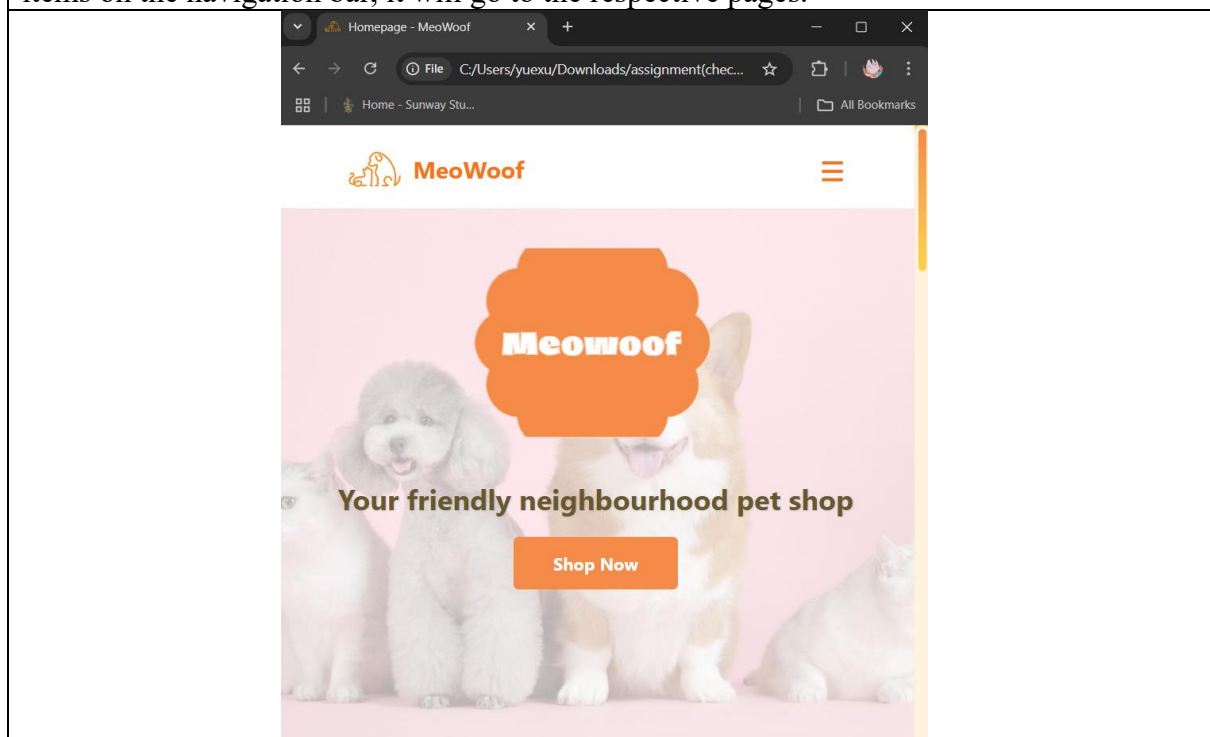

On desktop or wider screen, the home page will show a navigation bar that allow users to move around different pages.

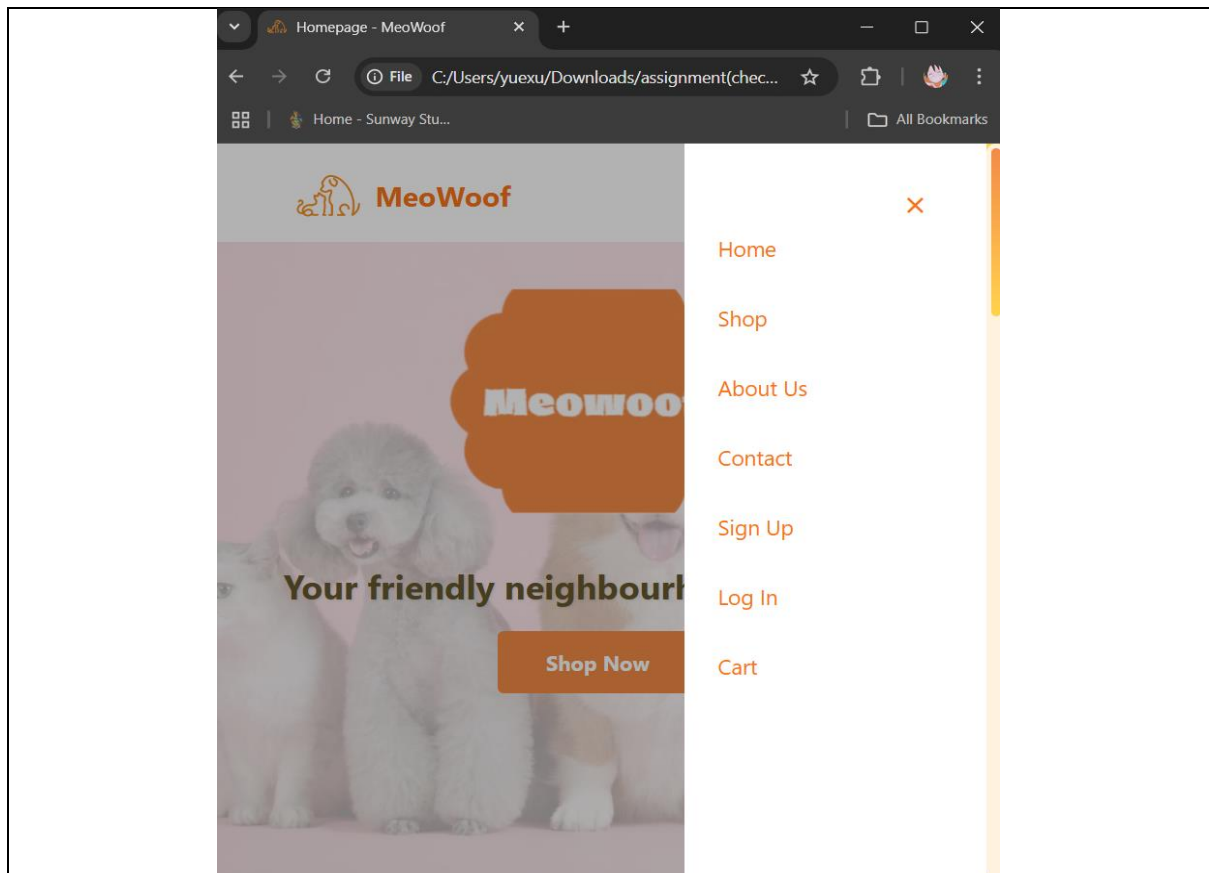

When user hover over the navigation item, it shown a different colour.

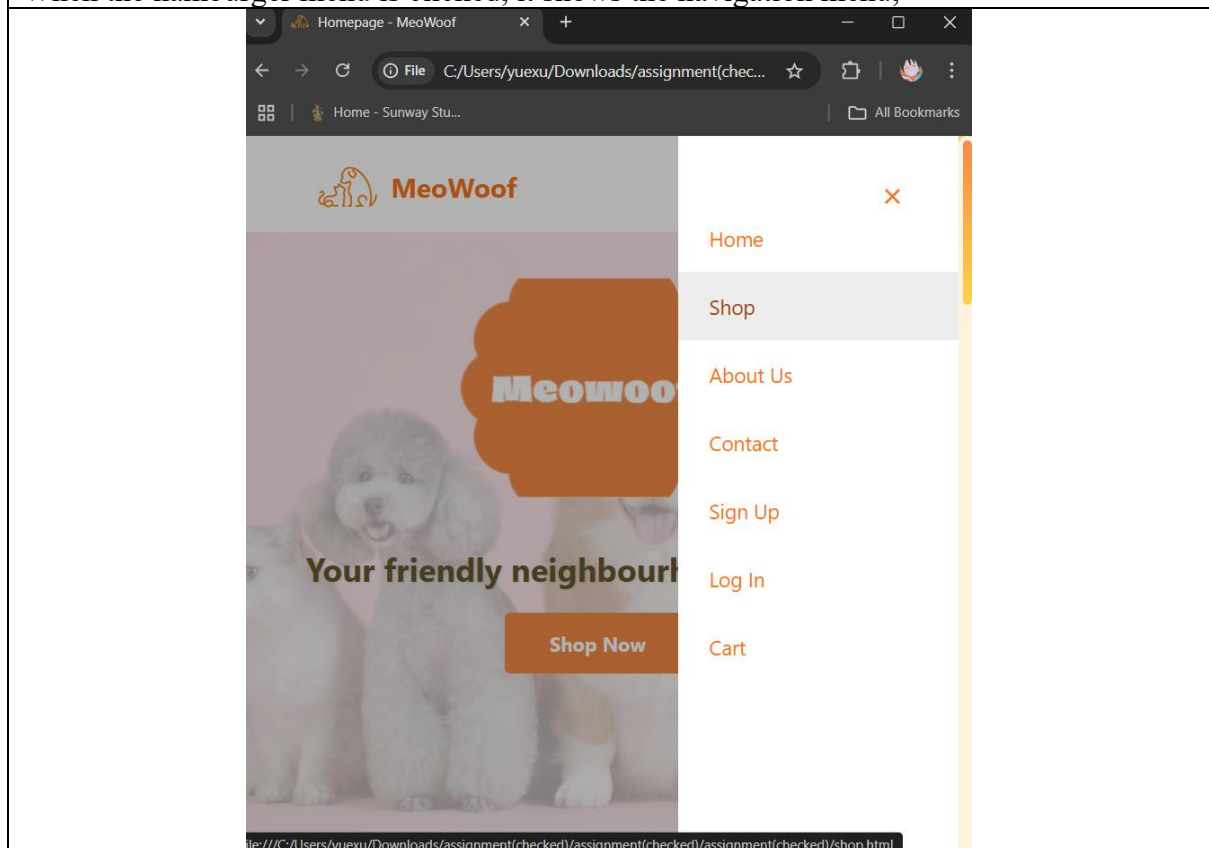

When clicked on the shop, the colour turns to the visited colour and is shown, then it turns to the shop page. It works the same for other pages too, when you click on the navigation items on the navigation bar, it will go to the respective pages.

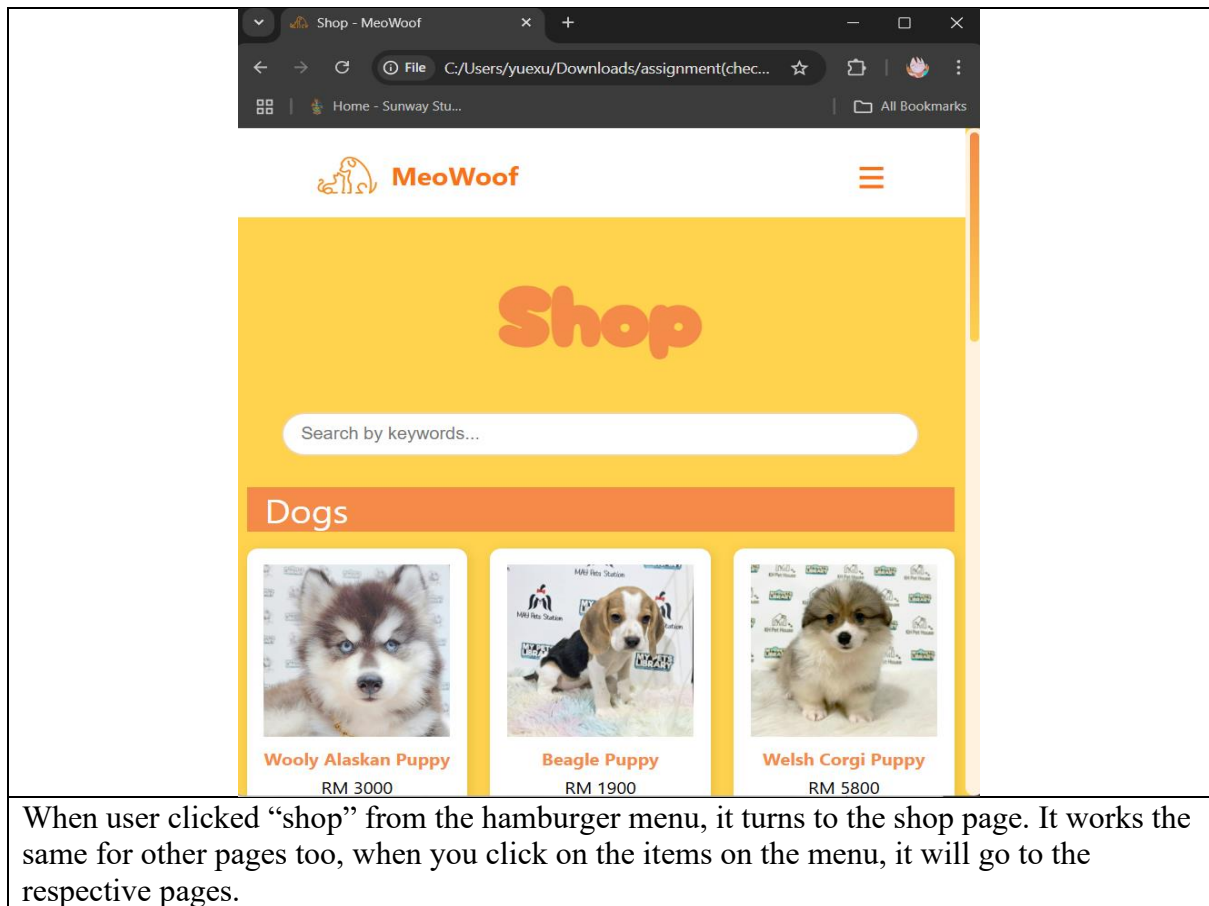

On mobile or smaller screen, a hamburger menu will appear on the top right instead of the navigation bar.

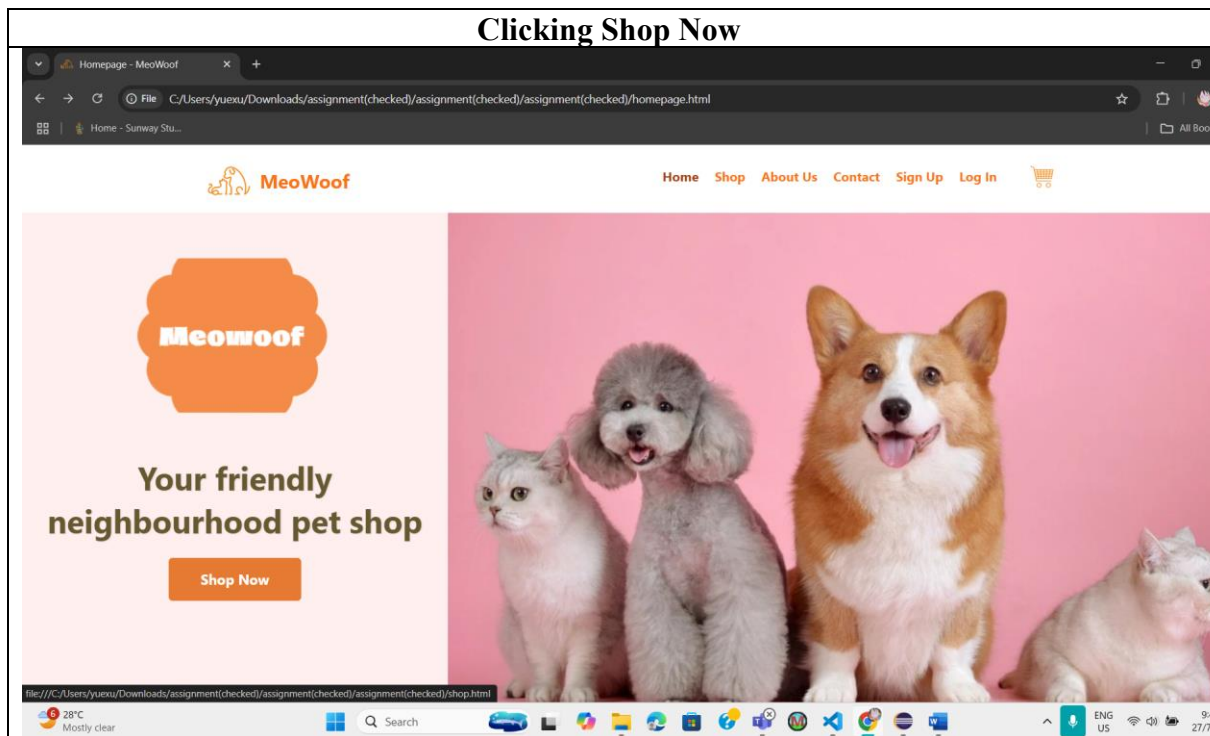

When the hamburger menu is clicked, it shows the navigation menu,

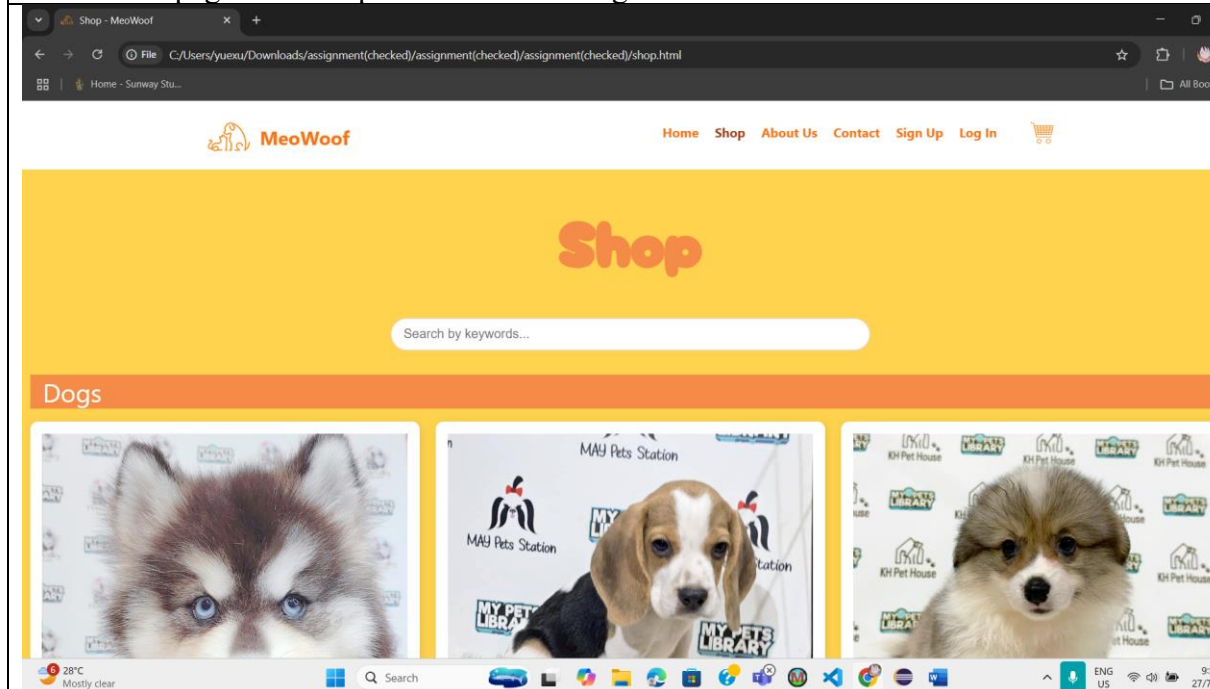

When any item in the menu is hovered or being click, it shows the grey colour as its background colour.

Homepage

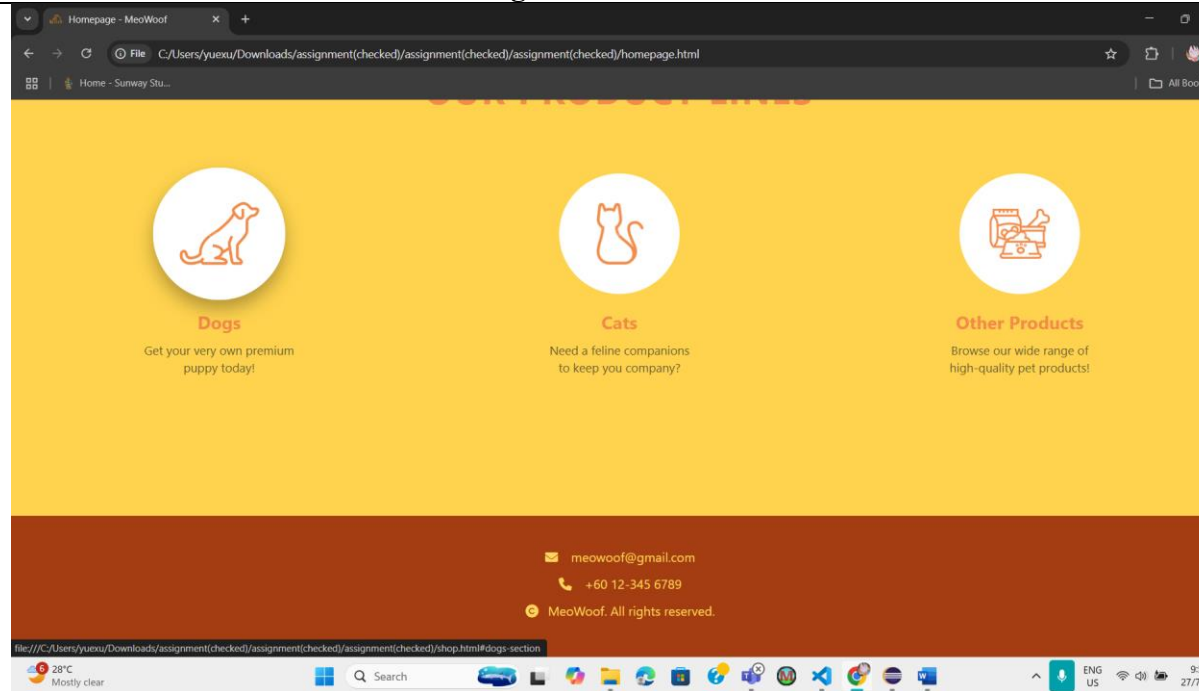

In the homepage click shop now will be having the hover colour and transition.

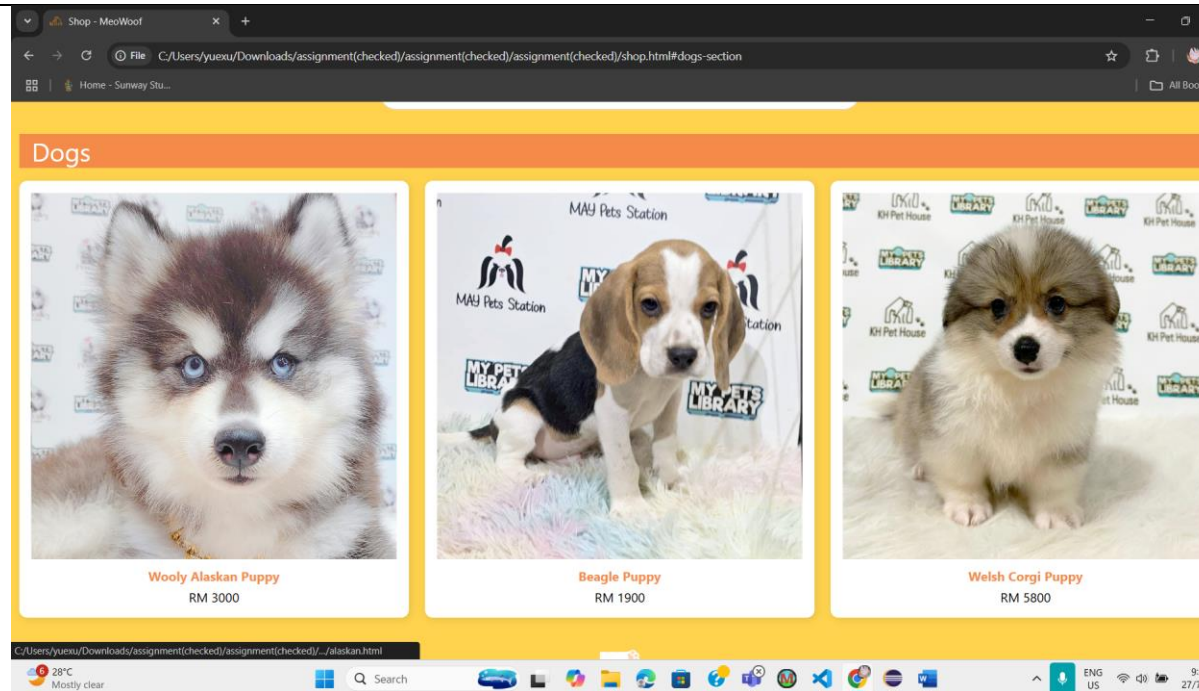

When it clicked it turn to shop page.

Clicking Interactive Button

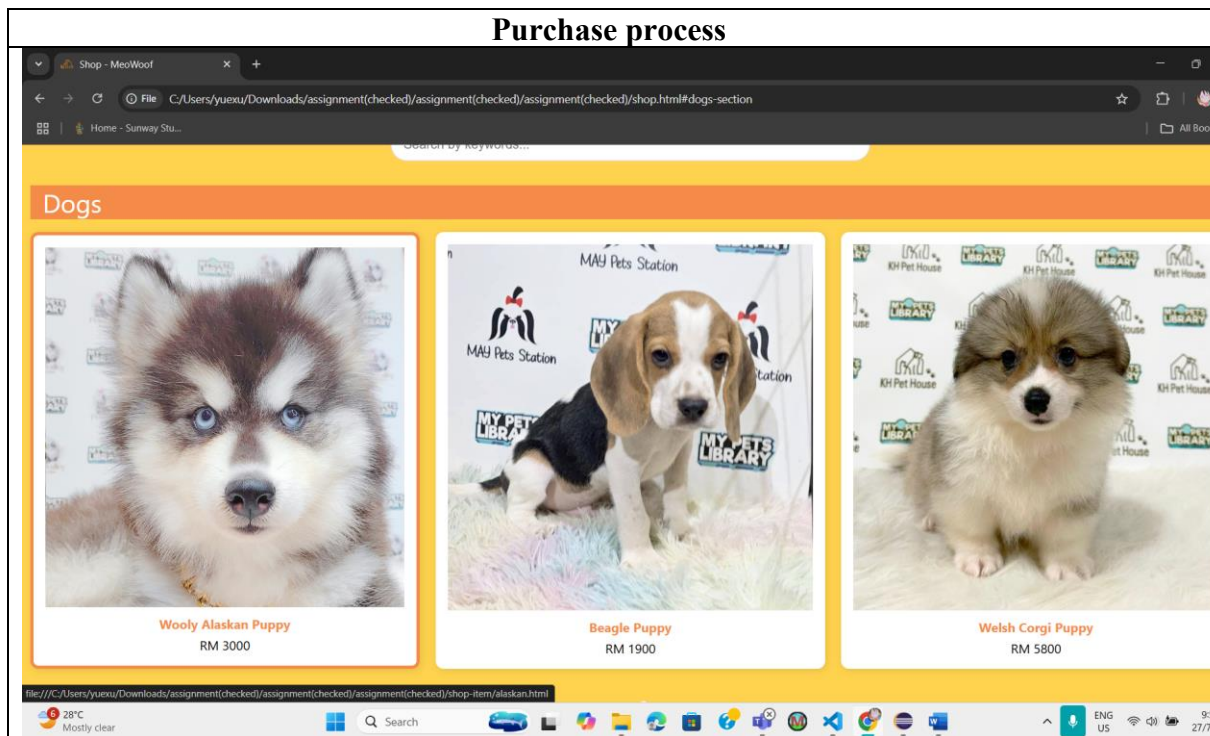

When you click one of the three interactive buttons, the button will be larger than before, which shows the transformation.

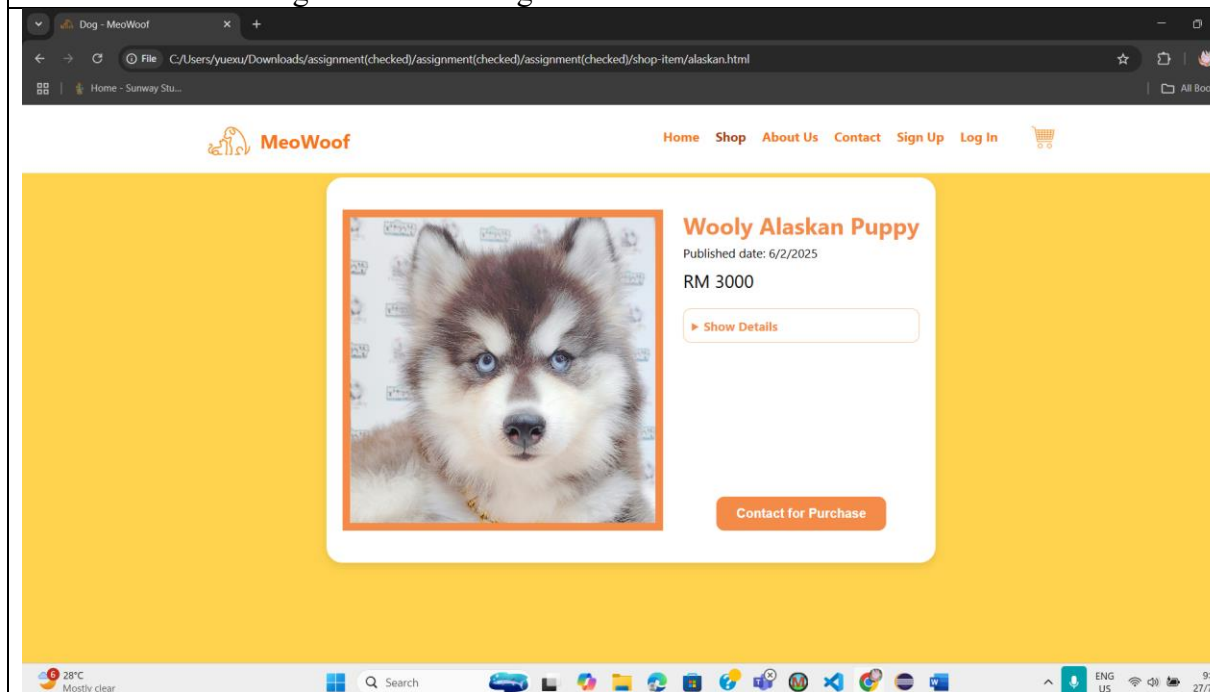

When it clicked one of the Dogs interactive buttons, it went to the dog category. This function is similar for Cats or Other Products, where user will go to the respective category after being clicked,

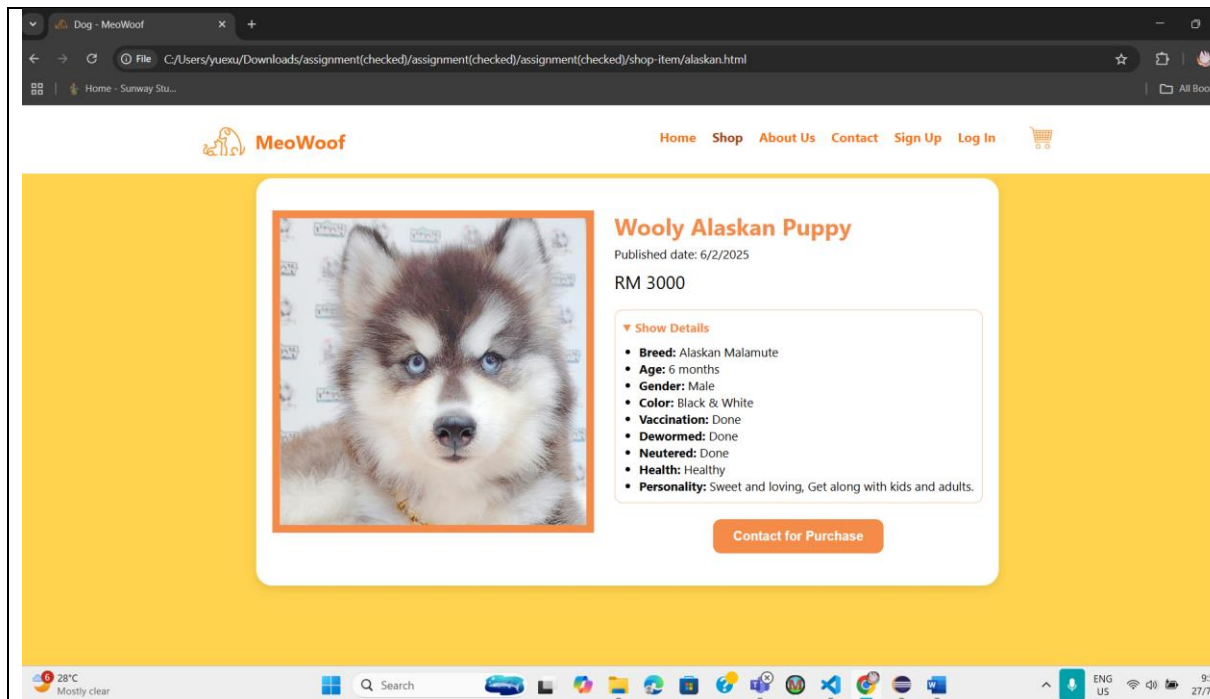

Shop / Item page

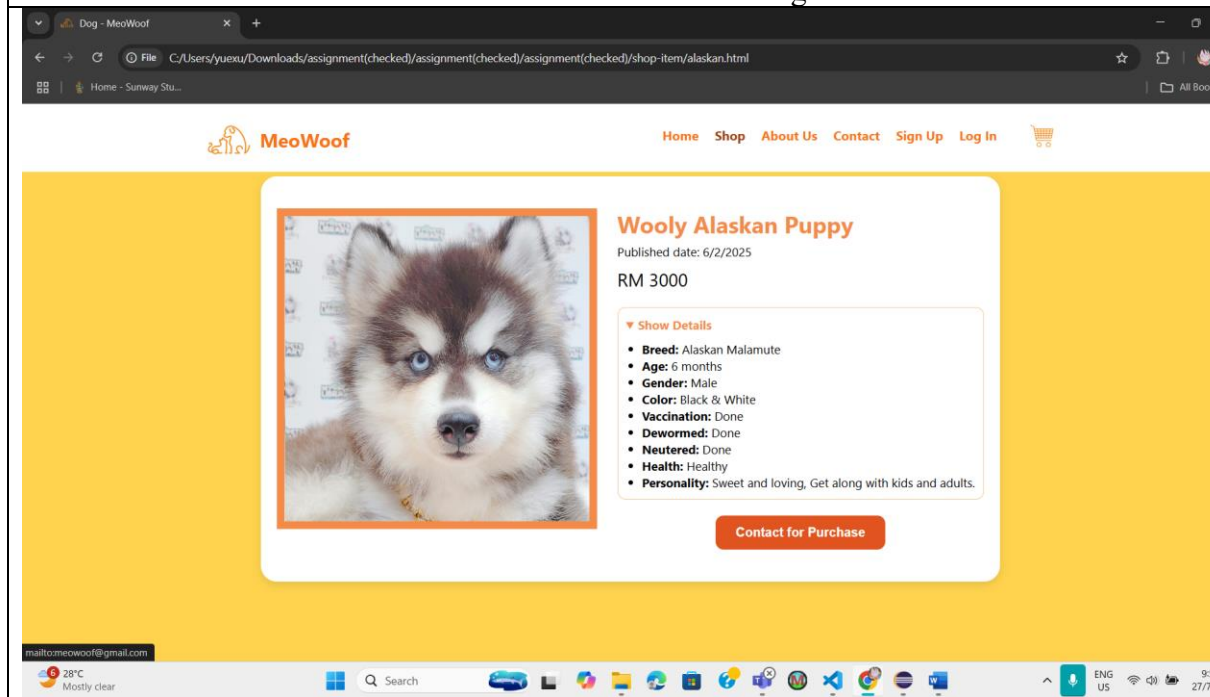

When hovering or clicking, the first dog, which is the Woody Alaskan Puppy of the outer border colour is changes which creating an effect.

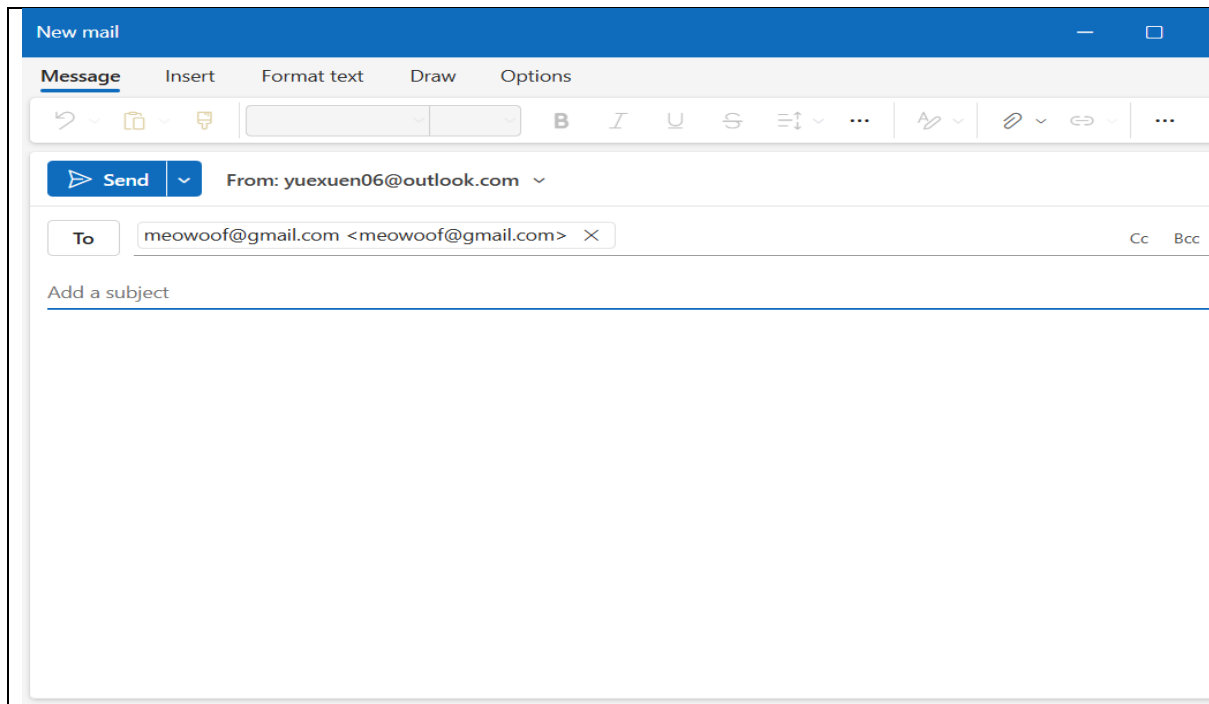

When the item is clicked, it goes to the item page and shows the details of the dog.

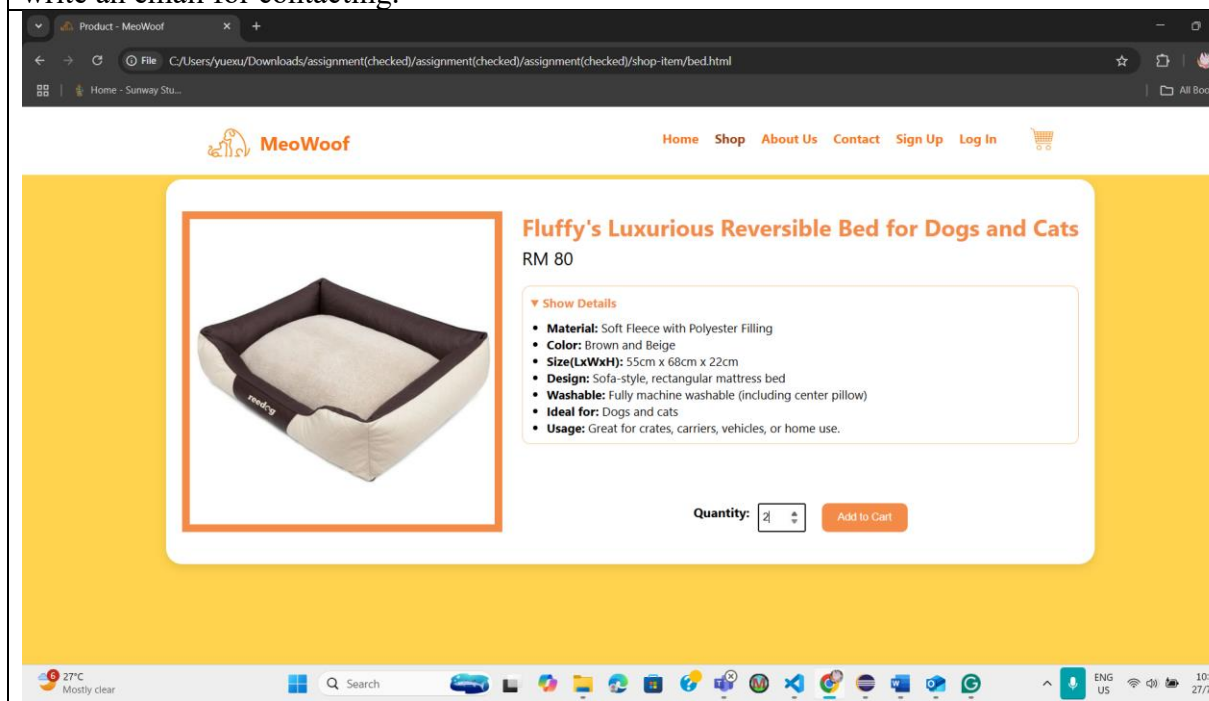

When clicked show details the full information about the dog is shown.

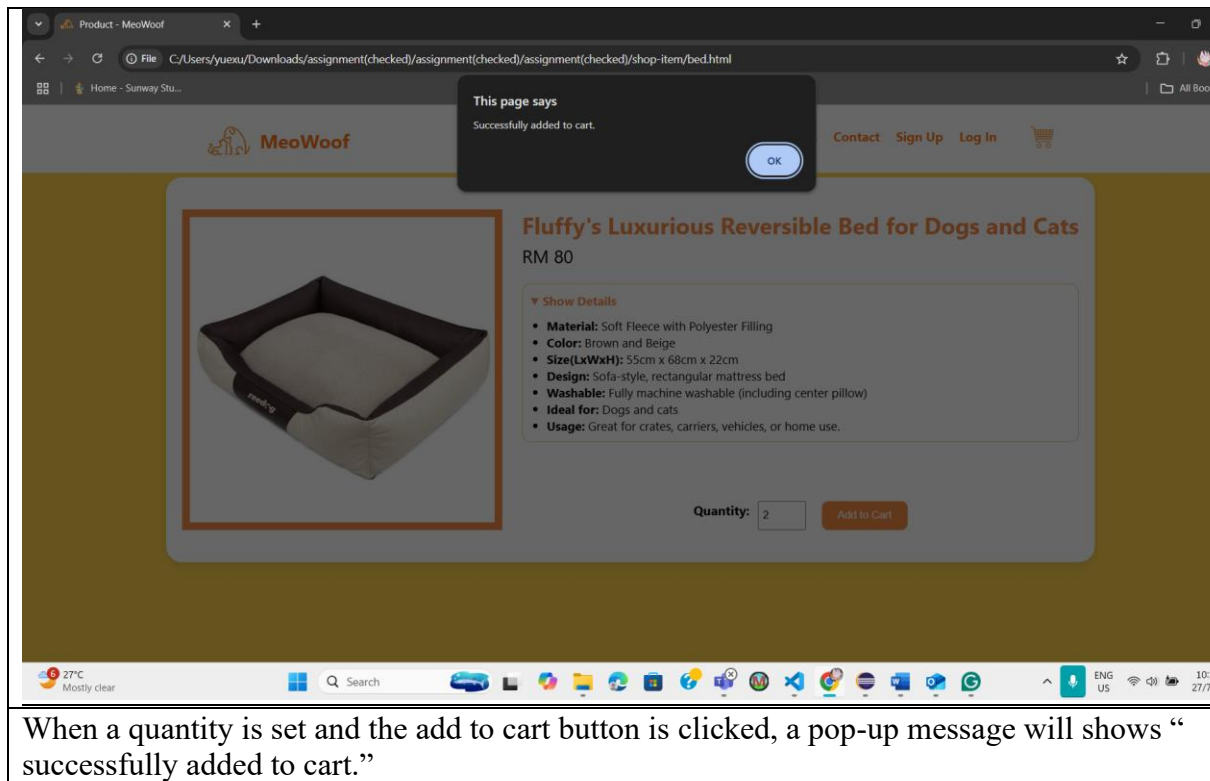

When clicking or hovering over the button of the Contact for Purchase, it shown the colour to letting user know is being hovered.

When the Contact for purchase is clicked, it goes to the user's email application to let user write an email for contacting.

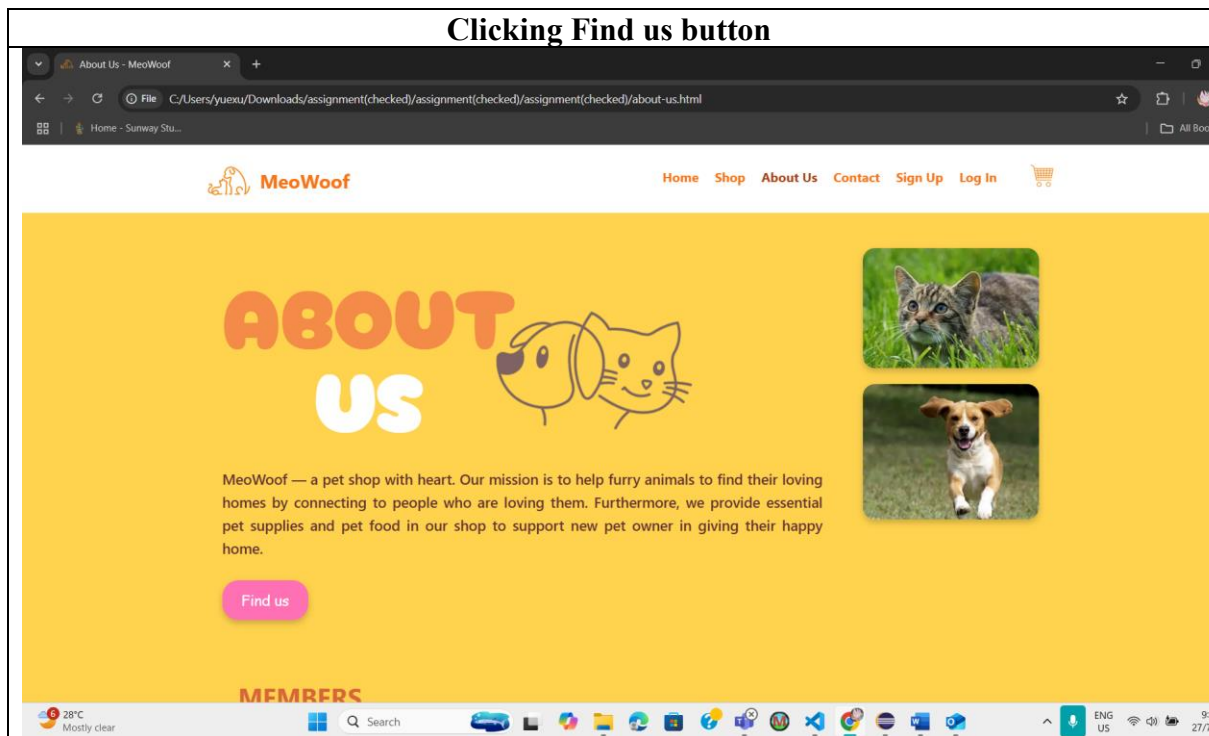

It is similar situation for cats and pet product too. However, for the pet products items, instead of showing “Contact of purchase” button, it shows a quantity selector that user can choose their quantity they want.

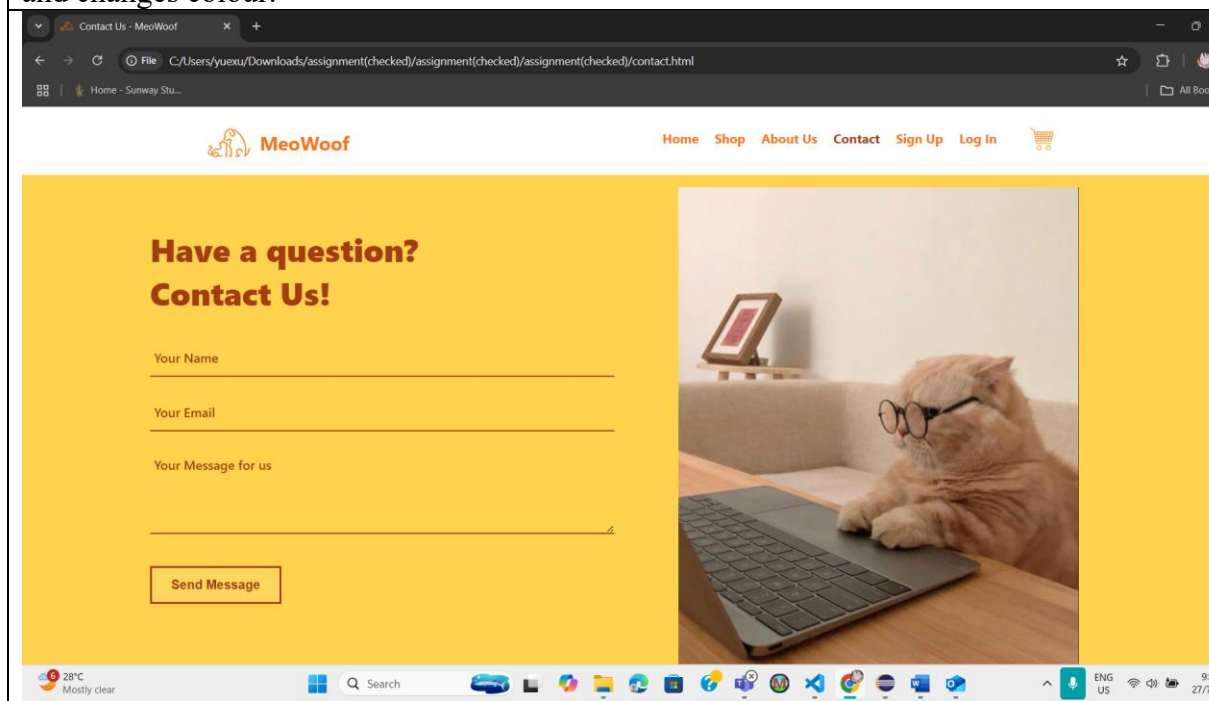

When a quantity is set and the add to cart button is clicked, a pop-up message will shows “ successfully added to cart.”

About us page

In the about us page, when the find us button is hovering or clicking, it shows on transition and changes colour.

When the find us button is clicked, it go to contact page.

Contact page

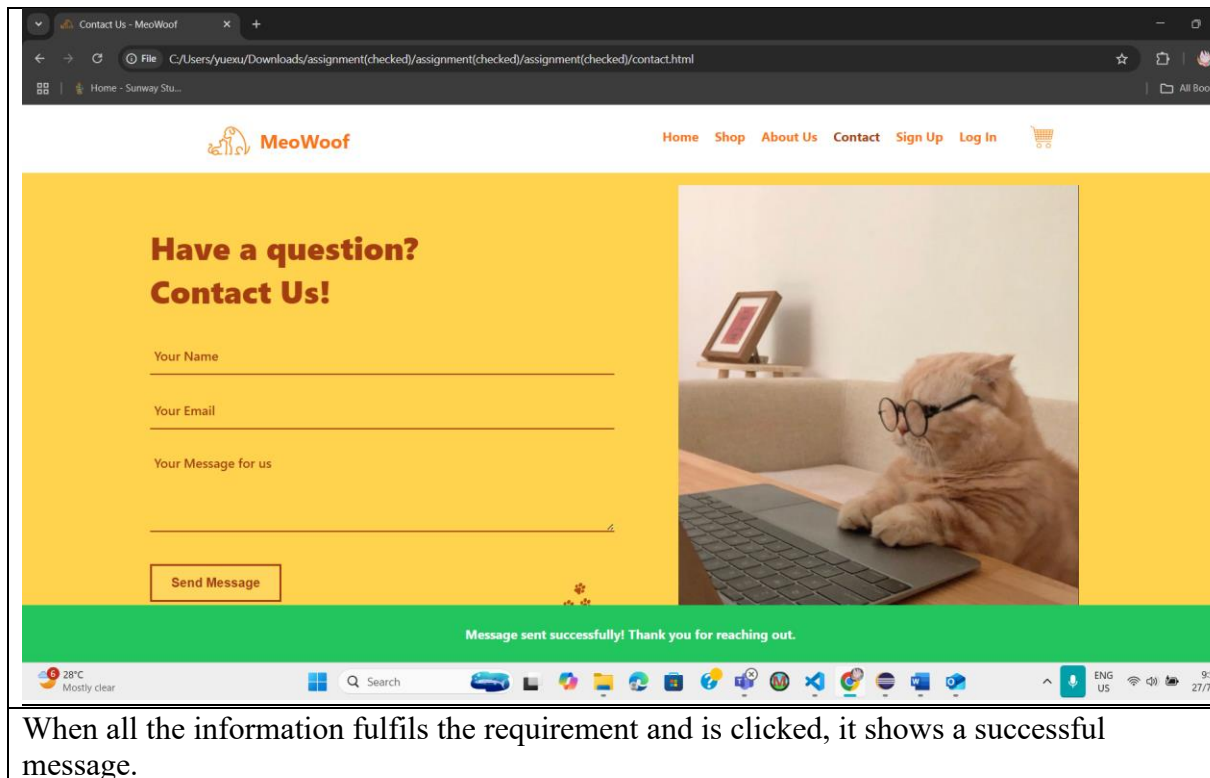

Checking valid data

The screenshot shows a web browser window with the URL `C:/Users/yuexu/Downloads/assignment(checked)/assignment(checked)/assignment(checked)/contact.html`. The page has a yellow background and a navigation bar with links: Home, Shop, About Us, Contact, Sign Up, Log In, and a shopping cart icon. The main heading is "Have a question? Contact Us!". Below it is a form with three input fields: "Your Name" (containing "Alice"), "Email" (containing "a"), and "Message" (containing "good"). A red error message box is displayed over the email field, stating: "Please include an '@' in the email address. 'a' is missing an '@'". A "Send Message" button is at the bottom of the form. To the right of the form is a video of a cat wearing glasses sitting at a desk with a laptop. A red banner at the bottom of the form area says: "An error occurred, please check your form and try again." The Windows taskbar at the bottom shows the date and time as 9:27/7.

The contact page includes the validation function. When the user is not typing an appropriate email address error message will show and inform the user of what error in their input email address.

This screenshot shows the same MeoWoof contact page, but with different input values. The "Your Name" field now contains "Your Name" (with the cursor at the end), the "Email" field contains "alice@gmail.com", and the "Message" field contains "good". A red error message box is now displayed over the "Your Name" field, stating: "Please fill out this field." The "Send Message" button and the cat video remain the same. The red banner at the bottom still says: "An error occurred, please check your form and try again." The Windows taskbar at the bottom shows the date and time as 9:27/7.

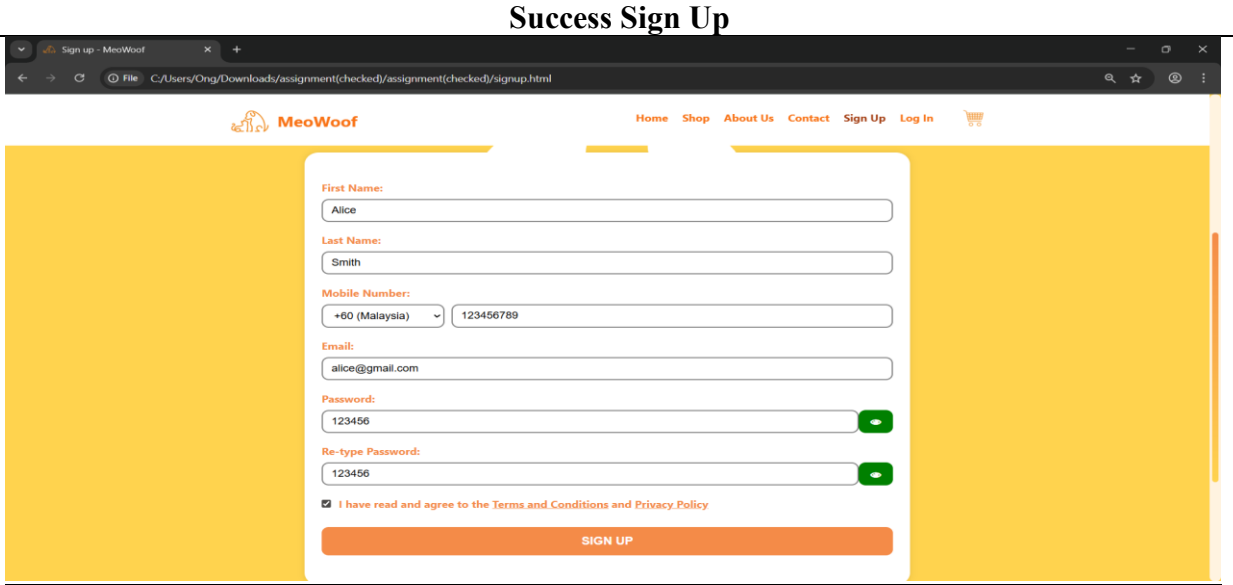

When the user not input the name or message will be show on the error message and required user to input information.

When all the information fulfils the requirement and is clicked, it shows a successful message.

Checking blank input

The screenshot shows a web browser window with the address bar displaying "C:/Users/Ong/Downloads/assignment[checked]/assignment[checked]/signup.html". The page has a yellow background with a white silhouette of a person. A white sign-up form is centered on the page. The form fields are: First Name (empty), Last Name (containing "Alice" with a red error message "Please fill out this field."), Mobile Number (containing "+60 (Malaysia)" and "123456789"), Email (containing "alice@gmail.com"), Password (containing "123456"), and Re-type Password (containing "123457"). There is a checkbox for "I have read and agree to the Terms and Conditions and Privacy Policy" which is checked. At the bottom of the form is an orange "SIGN UP" button.

If any of the fields are empty, the form will fail to submit, and a message will appear in the blank field and remind the user to fill in.

SIGN UP

The image displays two screenshots of a web form titled "Sign up - MeoWoof". The form is set against a yellow background and contains the following fields: First Name, Last Name, Mobile Number (with a dropdown for country code), Email, Password, and Re-type Password. A checkbox for "I have read and agree to the Terms and Conditions and Privacy Policy" is located below the password fields. An orange "SIGN UP" button is at the bottom.

In the top screenshot, the "First Name" field contains "Alice" and the "Last Name" field contains "Alice123". A tooltip message appears over the "Mobile Number" field, stating: "Please match the requested format. Must be letter only".

In the bottom screenshot, the "First Name" field contains "Alice" and the "Last Name" field contains "Alice#&*§". The same tooltip message is present over the "Mobile Number" field.

When the user enters any character other than letters, such as numbers or symbols for the first name and last name sections, the form will fail to submit, and a message will appear to remind the user that only letters can be entered.

When the password length requirement is reached, the form will check if the password and re-type password are the same. If not, the form will fail to submit and display a pop-up message to tell the user that their input for password and re-type password did not match.

Checking T&C and Privacy Policy Checkbox

The screenshot shows a web browser window with the address bar displaying "C:/Users/Ong/Downloads/assignment[checked]/assignment[checked]/signup.html". The page title is "Sign up - MeoWoof". The website header includes the "MeoWoof" logo and navigation links: Home, Shop, About Us, Contact, Sign Up, and Log In. A shopping cart icon is also present. The main content area features a sign-up form with the following fields: First Name (filled with "Alice"), Last Name (filled with "Alice"), Mobile Number (country code dropdown set to "+60 (Malaysia)" and number field filled with "123456789"), Email (filled with "alice@gmail.com"), Password (filled with "123456"), and Re-type Password (filled with "123457"). Each field has a green eye icon for toggling visibility. Below the password fields is a checkbox labeled "I have read and agree to the Terms and Conditions and Privacy Policy". A red error message box with an exclamation mark icon is positioned over the checkbox, stating "Please check this box if you want to proceed." At the bottom of the form is a red "SIGN UP" button.

When the user tries to submit the form without checking the terms and conditions or the privacy policy checkbox, the form will fail to submit. The user can only proceed once the checkbox is ticked.

Log in page

Success log in

The first screenshot shows a web browser window titled 'Log in - MeoWoof' with the URL 'C:/Users/Org/Downloads/assignment[checked]/assignment[checked]/login.html'. The page has a yellow background with a white silhouette of two dogs. A white login form is centered, containing an 'Email:' field with 'alice@gmail.com', a 'Password:' field with '*****', a 'Forgot Password' link, an unchecked 'Keep me logged in' checkbox, and an orange 'LOG IN' button. Below the button is a link 'Don't have an account? Sign up here'.

The second screenshot is identical to the first, but the 'Keep me logged in' checkbox is now checked.

The third screenshot shows a web browser window titled 'Success Login - MeoWoof' with the URL 'C:/Users/Org/Downloads/assignment[checked]/assignment[checked]/success-login.html'. The page has a yellow background. A white box in the center contains a heart icon with a paw print inside, the text 'Login successful!', a welcome message 'Welcome to MeoWoof! You can continue using our website.', and an orange 'Back to Homepage' button.

When email and password are entered correctly in a valid format, the user can click on the log-in button and be brought to the successful login webpage. This indicates that the user has successfully logged in, and they can click on the Back to Homepage button to return to the homepage. The Keep me logged in button is not compulsory to be checked; the user can choose if they want to tick it.

Checking email

The image displays two screenshots of a web browser showing the login page of a website called "MeoWoof". The browser's address bar shows the file path: `C:/Users/Ong/Downloads/assignment[checked]/assignment[checked]/login.html`. The page has a yellow background with a white silhouette of a cat's head in the upper right. The navigation bar includes links: Home, Shop, About Us, Contact, Sign Up, Log In, and a shopping cart icon. The login form is centered and contains the following elements:

- Email:** A text input field. In the first screenshot, it contains "alicegmail.com". In the second screenshot, it contains "alice@".
- Password:** A text input field with masked characters (dots).
- Forgot Password:** A link below the password field.
- Keep me logged in:** A checkbox with the label "Keep me logged in".
- LOG IN:** A large orange button.
- Don't have an account?** A link with the text "Sign up here".

In both screenshots, a red error message box is displayed above the password field:

- First screenshot:** "Please include an '@' in the email address. 'alicegmail.com' is missing an '@'."
- Second screenshot:** "Please enter a part following '@'. 'alice@' is incomplete."

Below the screenshots, a text box contains the following text:

Same as sign in, when a user enters an incomplete or invalid email address, a message will appear to remind the user to re-enter a valid email.

Checking Password

Log in - MeoWoof

C:/Users/Ong/Downloads/assignment[checked]/assignment[checked]/login.html

Appendix

Meeting record

Date	Attended by	Items Discussed
29 May 2025	All members	The team agreed on the project idea of creating a website for a pet shop. Members also explored and shared a few reference websites for inspiration.
17 June 2025	All members	The team discussed the structure of the website, which will include key features such as a navigation bar, homepage, shop page, contact page, login/sign-up system, and member introduction. Tentative role and task distribution among members was also decided.
25 June 2025	All members	Discussed using Penpot for designing web layout but found it unsuitable. Decided to use Canva instead and planned a time to work on the design together.
30 June 2025	All members	Started designing website pages, decided on the name MeoWoof for the pet shop, and finalized the logo.
19 July 2025	All members	Every member finished creating their assigned webpages individually. The team gathered all the code and linked the pages together to form a complete website.
21 July 2025	All members	The team discussed on work delegation for report.
28 July 2025	All members	The team discussed on work delegation for video presentation.

Activity log record
